Wholesale Agricultural Chemicals Price List

A Message to Our Dealers

Prevent Insect Infestation in Stored Grain for a Full Year With One Application

Agricultural chemicals are playing a major role in modern farming. We attempt to keep abreast with the new chemicals and offer you a complete line. Here is a new recommended grain protectant—TETRAKOTE.

Tetrakote is the only liquid grain protectant that is applied to the grain before it goes into storage. The protective coating eliminates the danger of insect infestation and damage to grain. One application of two gallons per one thousand bushels at an average cost of 2c per bushel protects grain for at least a full year. This powerful insect killer is harmless (when used as directed) to the milling, eating, and germination qualities of the grain.

We take this opportunity to solicit your requirements. We urge you to order out a supply—be ready to serve your customers and take advantage of the national promotion and advertising.
